**INCLUDES
MYDOOM VIRUS
REMOVAL AND
PROTECTION**

As you continue to use your Windows® based computer, junk builds up in the “geeky” hidden areas of your system slowing it down and reducing its efficiency. It’s like the computer equivalent of cholesterol.

Every time you install and remove software, run “temporary” programs and forget to remove them, or simply visit certain web pages, junk-ware builds up, eating up your computer’s resources until it starts to perform poorly.

A new breed of programs, known as “scumware”, makes matters much worse. These programs are **not detected by most antivirus software**, because they “ask your permission” to be installed (such as by hiding in another program, and you are advised of their existence hidden in the license agreement). Some are so devious that even advanced users can be fooled.

Have an expert come to your home or office to remove these damaging programs and speed-up your PC for only \$60!

A recent check found some of our client’s PCs to have a dozen of these programs running, accessing servers each and every time the user visits a web site, checks email, or was simply idle for a few seconds. No wonder their computers were slow!

Scumware, adware and spyware infiltrates your computer and does things like:

- Send a log of your web activity to advertisers
- Display ads over, under, or after web sites
- Add offensive links to innocent web sites
- Replace search engines with ad pages
- Block access to real search engines, sites, etc.
- Send copies of your emails to be analyzed by advertisers
- Secretly download and install software from sponsors

These programs require expert removal. The “official” removal instructions will often actually install alternative software on your PC. Many of the blocking tools offer you highly technical choices, some of which are not desirable and may actually be dangerous.

HELP IS HERE!

To combat this threat we are offering an in-home computer service special. For a flat \$60 fee, a computer expert will come to your home or office and perform all of the steps shown here.

If you are still not satisfied with the performance of your PC, he can show you the *minimum* upgrades satisfy your needs. All in your own home! Call for details!

- Scan your PC for viruses, adware, spyware and hacks
- Install anti-scumware and *SAFE* pop-up blocker software
- Clean system registry and tune-up your system settings
- Update your antivirus software*, install antivirus if needed
- Remove unneeded, junk programs
- Perform a security and stability check
- Check for other possible problems*
